Osteopore is changing lives and transforming healthcare with its revolutionary use of 3D-printing in the medical technology (biodegradable, 3D-printed bone scaffold technology) and bioengineering.

Mr Khoo Hoon Seng, director and chief executive officer of Osteopore, says: “Through this award, we demonstrate that Pioneering new technology

Incorporated in 2003, Osteopore now employs 11 staff members. Since its first successful clinical trial in 2002, Osteopore has supplied over 10,000 3D-printed surgical implants to patients.

The company’s products are made of a special polymer that provides structural support while creating an environment that is conducive to the organic regeneration of new bone and tissue. This polymer is eventually broken down in the body, leaving no trace and removing the need for transplanting bone.

It is now South-east Asia’s leading fishing tackle distributor — with headquarters as well as fishing nets. Established in 1942, Hong Guan started distributing ropes and other hard-ware as well as fishing nets.

The company’s proprietary brand Pioneering new technology
